

type 1 diabetes

CAN WE PROTECT OUR CHILDREN?

**ARE YOU OR YOUR PARTNER PREGNANT?
DO YOU, YOUR PARTNER, OR ANY OF YOUR CHILDREN HAVE TYPE 1 DIABETES**

If you answer "yes" to both questions, then the TRIGR study team needs your help.

Recent diabetes research has pointed to a possible link between infant nutrition and the development of type 1 (insulin-dependent, or juvenile) diabetes in childhood. TRIGR is an international study looking at infant nutrition to find out whether the number of children who develop type 1 diabetes can be reduced.

For more information on TRIGR, please call before baby arrives **1-888-STOP-T1D** (1-888-786-7813) or visit us on the web at **WWW.TRIGR.ORG**

Participating institutions in North America are located in:

Calgary, Alberta, Canada
Edmonton, Alberta, Canada
Halifax, Nova Scotia, Canada
London, Ontario, Canada
Los Angeles, California, USA
Montreal, Quebec, Canada

New York, New York, USA
Ottawa, Ontario, Canada
Pittsburgh, Pennsylvania, USA
Ponce, Puerto Rico
Quebec City, Quebec, Canada
Saint John, New Brunswick, Canada

Seattle, Washington, USA
St. John's, Newfoundland, Canada
St. Louis, Missouri
Toronto, Ontario, Canada
Vancouver, British Columbia, Canada
Winnipeg, Manitoba, Canada

Centers in Europe and Australia are coordinated through Helsinki, Finland.
