

# Attention Teens with Type 1 Diabetes

(And parents too!)

Help design a new approach to diabetes clinic visits

**Title of the Study:** Transdisciplinary Versus Usual Care for Type 1 Diabetes in Adolescence

## About the Study:

We think that we may be able to make diabetes clinic visits more productive and satisfying for all involved by planning and later testing a new model of care called Transdisciplinary Care (TC). The TC model would involve having regular diabetes clinic visits with a nurse practitioner, dietitian and psychologist at the same time. We want to hear what you think about this new model of care so we can plan for it in more detail. Participants will be paid for each submitted response to questions and polls that will be distributed to them. If you're interested in learning more about taking part in this research, ask your parent to follow the link below for more information about the project.

## Being in this study requires that:

- You are at least 11, but not yet 17 years old
- You have had Type 1 Diabetes for at least one year
- Your most recent Hemoglobin A1c is 7.5% or higher
- You can read and write in English well enough to answer questions over the internet
- At least one of your parents (or other caregiver) gives permission for you to be in the study
